INT-CL (IPC): G06F017/60

ABSTRACT:

PROBLEM TO BE SOLVED: To provide a stock chart which makes it possible to easily grasp the trends of stock prices by generating a stock chart only with necessary irreducible final prices.

SOLUTION: This stock chart generation system 1 consists of an input means 2 which inputs stock price information, a stock price storage means 3 which stores the inputted stock price information, a processing means 4 which stores the inputted stock price information in the stock price storage means 3 according to a specific procedure, an arithmetic means 5 which calculates daily data and weekly data on the basis of the stock price information stored in the stock price storage means 3, an arithmetic result storage means 6 which stores

the arithmetic result calculated by the arithmetic means 5, and an output means 7 which outputs the stock price information stored in the arithmetic result storage means 6 and brand information specifying the stock price information.
